# Cash rounds, balances and external payments

Tower Rush India | https://towerrushindi.com/en/real-money/

## Three different money events

A Build stake begins an individual game round. Cashout settles that round into the operator balance. A deposit or external withdrawal moves money across the cashier boundary. The reported CASH accounts use a single money balance, so a separate game-to-cashier wallet transfer is not required. FUN is not a cash deposit. CASH and WELCOME records are separate accounts or episodes; a bonus nominal amount is not automatically withdrawable cash.

## Acceptance and settlement

There is one stake panel and no shared flight countdown. TR-D-02 sent a 10 FUN request at 08:31:00.000 IST on 3 November 2026; acceptance followed at 08:31:00.240. The debit follows server acceptance, not animation. Manual Cashout at 1.5× credited 15 FUN, net +5 FUN. The 0.24-second delay added no multiplier. A second press did not establish a second bet; a Build after final settlement is not accepted into the old round.

The state sequence is ready → Build request → accepted → floor result → Build/Cashout choice → settled or void. Pending is intermediate. The stake may be changed before submission; after the accepted first Build, cancellation cannot replace Cashout. A new stake amount belongs to the next round. One event_id produces one credit, even when its response or history is read again.

## The ledger identity

| Entry | Treatment |
|---|---|
| Opening balance | Crorebet begins with an existing 500 INR; the other cash episodes begin at zero before DEP. |
| Deposit D | One own-method deposit in each operator currency; do not add different currencies together. |
| Stakes | Five stakes of D/5, giving turnover D. |
| Round gross | Sum of the five complete game payouts; neither net profit nor bank receipt. |
| Withdrawal W | Balance reduced by W; recipient receives W minus the included fee. |
| Other fees | No second intermediary or on-top deduction in these recorded ledgers. |
| Closing cash | Opening cash + D − stakes + gross − W. |
| Bonus cash | Zero in CASH; separate WELCOME balances and deadlines remain separate. |
| Withdrawable balance | The settled CASH remainder after WD; no bonus nominal amount is added. |

UPI, Visa debit and USDT/TRC20 belong to their operator records. Blockchain networks are not assigned to banking operations. Deposit credit equals D; WD receipt equals W−fee. Operator tariffs are zero, 0.5% or a fixed 1 USDT according to the withdrawal. Deposit timing and withdrawal review+transit are distinct intervals.

## Risk and configuration

TR-IN-97 has 97% RTP and expected net −0.03T for fixed turnover T. A separate two-outcome illustration uses gross 2× with p=0.485 and expected net −0.03b per stake b; it is not a Tower Rush floor probability. One-panel initial risk in TR-D-02 is 10 FUN. Two-panel flight classifications $X<t1$ / $t1\le X<t2$ / $X\ge t2$ and $b2=b1(t1-1)$ do not apply to this original.

The monetary cap constrains gross without creating automatic Cashout. Settle an accepted round first, then block a new entry if the session limit applies. After connection loss, inspect the original server result. The rules provide closure and credit of registered winnings after one hour without restoration. A malfunction may produce void and refund rather than an ordinary loss.

## Complete episode records

Each deposit, five-round ledger, withdrawal, fee, review time, transit time and closing balance is preserved in its E01–E10 operator dossier, in the cash-episode sections. G17-deposit.pdf and G18-withdrawal.pdf explain the operation fields. These reported cases are not guarantees for another account or period.
