Registration fields, verification stages and account scope

Tower Rush India | https://towerrushindi.com/en/registration/

Choose the account scope before completing fields

The operator accounts in the reported episodes are Indian accounts. Required registration fields are age 18+, India, currency, email or phone, password or OTP, and acceptance of terms. Marketing subscription and a promotional code are optional in these selected routes; absence of the optional code did not block the selected offer. Email, phone and combined confirmation schemes differ by operator.

Separate confirmation from identity checks

Stage	Recorded distinction
Email confirmation	Establishes control of the address; does not automatically verify a phone or identity document.
Phone confirmation	A separate OTP for phone/email-and-SMS routes; not inferred for an email-only route.
Registration document	Only the registration_identity profile requires it at registration.
First deposit	The payment_method_proof profile establishes ownership of the payment method; other profiles are not assigned that step automatically.
First withdrawal	The operator-specific first_withdrawal_documents record governs.
Repeat withdrawal	The repeat_withdrawal_documents record is separate; changed details can trigger another check.

First login uses the registered email/phone and password or OTP. Subsequent access may use a password, OTP or a saved password unlocked by local OS biometrics. The device prompt does not replace server authentication or KYC. The ten exact registration and document sequences appear in the account sections of E01–E10.

Territorial conditions remain attached to the operator

Betify general terms 2.9 prohibit registration from India. The separately recorded BETIFY-IN episode does not confer a general right for new Indian users to register. A casino language button, an INR display or access to a page is not permission to open an account. The editorial site has no reader account; registering with a casino does not create a towerrushindi.com login.

After registration

Change email or phone through settings with confirmation of the old and new channel; a change may trigger further KYC. Recovery uses Forgot password and the confirmed email/phone. Codes last ten minutes from issue, and a new code cancels the previous code in the recorded profile. Ordinary closure and self-exclusion are different: active one-year 1w self-exclusion is not reopened early.
