Deposit requests, limits and credit records

Tower Rush India | https://towerrushindi.com/en/deposit/

Create a request for the correct account and method

The recorded route is Wallet → Deposit. Use the own-account method specified in the episode: UPI in INR, Visa debit in USD/EUR, or USDT on TRC20. UPI is a transfer, Visa a card and USDT a token; TRC20 is a network. MetaMask and exchanges are another access layer, not interchangeable payment products. An account at a payment service does not establish that a casino accepts it.

Both game and payment accounts are Indian in these episodes; the bank account belongs to the participant. Indian UPI/card issuers are distinct from a crypto wallet without a bank issuer. Only the own account named in the request is used. The card episodes use debit Visa, not an inferred credit/prepaid equivalent. Cash episodes have no active welcome; welcome qualification has its own allowed deposit method.

Recorded minimum and maximum amounts

Operator / method	Minimum
1Win	400 INR
Stake selected wallet	5 USDT
MyStake	20 USD
1XBET	250 INR
4RABET	350 INR
Melbet	300 INR
Parimatch	450 INR
Crorebet UPI	100 INR
Betify	20 EUR
Betclic	600 INR

The profile maximum per request is 100,000 INR for UPI, 2,000 USD/EUR for Visa and 2,000 USDT for the crypto route. A currency displayed in registration is not a payment method. Exact amounts and timestamps for all ten DEP records are in E01–E10, under their deposit sections; DEP-1WIN is 400 INR and the Crorebet actual deposit is 500 INR despite its 100 INR minimum.

Request life cycle

Step	Recorded rule or result
New request	Create one before every new transfer; never reuse an expired request.
Validity	15 minutes from creation.
Details	UPI intent with purpose, card confirmation, or crypto address in the selected network.
Before transfer	Request exists; no transfer or balance credit yet.
Confirmation	UPI PIN/bank confirmation occurs in the bank interface. The casino password does not replace it.
Credit	One confirmed amount credited. Each DEP credit equals the amount sent; deposit operator/external fees are zero in these episodes.
Currency	Sending and receiving currencies match, at 1:1. No second INR-equivalent credit is added.
Delay	Read the existing request history; do not treat a repeat transfer as recovery.
Identifiers	DEP-1WIN through DEP-BETCLIC are local episode keys, not fabricated bank UTRs or public blockchain TXIDs.

The Stake USDT/TRC20 route

The participant sent externally from an own wallet, not an internal exchange Pay ID. The recipient used the same TRC20 network; ERC20 is not the same route. No memo/tag was used. The selected deposit required 20 confirmations; banking operations do not have blockchain confirmations. The actual address is not published. An incompatible-network transfer was stopped before confirmation; automatic recovery from such a mistake is not promised.

A public TXID identifies its blockchain transaction; DEP-STAKE/WD-STAKE remain local report keys. The recorded deposit was credited, and the later withdrawal was sent and completed. Network confirmation time and casino review time are separate. The full operator inventories, including methods not exercised in these cash episodes, are in G16-payments.pdf.
