Mobile access, devices and performance records

Tower Rush India | https://towerrushindi.com/en/app/

Channels and product ownership

Nine operator profiles use Android APKs; Stake uses PWA. All ten have an iOS web route in Opera. The APK is obtained from the operator application button. Galaxsys supplies the HTML5 game; the operator container is separate. There is no separate Tower Rush IPA or desktop EXE in the recorded profile. Operator Windows/macOS product statements do not establish a native game client.

Recorded environment

Object	Value
Android	Realme 14 Pro+, India; Android 15; realme UI 6.0; arm64-v8a; Opera Android 102.
iPhone	iPhone 15 Pro; iOS 26.5; Opera 6.8.1 WebKit container; arm64.
Desktop	ThinkPad T14 Gen 4; Windows 11 24H2 x64; 16 GB RAM; Brave 1.98.63; Chrome 156.0.8078.80.
Desktop viewport	1440×900 CSS px at 100%; separate 200% check retained controls and local table scrolling.
Phone viewports	iPhone 393×852 / 852×393; Android 412×915 / 915×412 CSS px.
Network	Airtel Wi-Fi 82.5 Mbit/s down, 24.8 Mbit/s up; separate Jio 5G recovery.
Coverage	Ten separate Android/iOS profiles; Linux, macOS and iPad outside the matrix. No VPN/bypass route.

Binary identity and installation

APP-1WIN-A is 36,700,000 bytes: 36.70 MB or 34.9998 MiB. MB=1,000,000 bytes; MiB=1,048,576. Installed size is 78.91 MB and data after 30 minutes is 22.00 MB. Other sizes remain operator-specific. The profile minimum is Android 10+; the separate Crorebet app page records Android 5.0 and version 3.6; the actual phone runs Android 15.

The APP profile revision is 3 November 2026. APP-1WIN-A through APP-BETCLIC-I are local report identifiers, not external package IDs. External build number, package ID, checksum, signing certificate, targetSDK, compileSDK and manifest settings belong to the binary distribution. targetSDK is the target platform; compileSDK is the build parameter. required=true marks mandatory hardware features, including a camera when listed. allowBackup, usesCleartextTraffic, supportsRtl, extractNativeLibs and application.name remain attributes of the particular manifest.

Updating through the previous channel preserved the account and history, without a new balance. Installation-icon appearance and interactive readiness are distinct times. Opera iOS 6.8.1, iOS 26.5 and the site version dated 3 November 2026 are separate fields.

Permissions and offline state

Camera permission was requested upon entering document capture. Refusal left file upload available and no photo event occurred. Notifications required separate consent; refusal did not close the cashier or game. Geolocation was separate, not a condition merely for launching. Android displayed a completion push after permission; iOS primarily used wallet history. Local OS biometrics unlocked a saved password without replacing operator KYC.

Offline, the shell opened but no new stakes were sent. After reconnection the original accepted-round history was read. Initial loading traffic was 7.20 MB; repeated exchange was 0.84 MB. Per-app 30-minute traffic and battery drops remain in the operator records. Battery drops are percentage points at 50% brightness on Wi-Fi, not wear. Moderate case warmth was assessed by touch; degrees Celsius belong to instrument measurements.

Timing denominator and results

Launch timing runs from pressing the Tower Rush card to usable Build and stake controls. A logo is not readiness. Cold launches clear site data; repeat launches retain cache. Five attempts × four series × ten operators gives 200 attempts, with zero failures in this matrix. Separate incidents have another denominator. APP-1WIN-A cold first result is 5.87 seconds; mean 4.414, median 4.830, minimum 2.750, maximum 5.870 seconds. All individual attempts in the 40 series are in the app sections of E01–E10.

Compare the same game version, launch type, environment, cache and network. Wi-Fi means exclude 5G and throughput is not launch time. INC-NET froze animation after Build submission; history established acceptance after recovery. TR-D-10 recovered one 10 FUN debit and one 15 FUN credit without a new stake.

Desktop controls and synchronisation

Search → card → mode takes three actions; Wallet → Deposit/Withdraw takes two. Tab changes focus; Space/Enter submits only on the focused control and creates no autoplay series. Opening/closing Rules creates no debit. A second device showed the same server balance, history and welcome progress, without a transfer or duplicate credit; Tower Rush contribution remained 0%. Local Logout differs from ending every session. Closing the on-screen keyboard exposed the amount field and Build, with no deduction before confirmation.
