Access errors, recovery and operation states

Tower Rush India | https://towerrushindi.com/en/not-working/

Acceptance determines the next step

Distinguish a request rejected before acceptance from a request accepted by the server whose result has not yet reached the screen. INC-NET occurred after stake acceptance and before final settlement was displayed; its state was accepted→settled after recovery. INC-VOID was a settlement malfunction with void+refund. A client timeout does not by itself establish a loss.

Complete action and recovery routes

Route	Action and recorded result	Error or boundary
R01 Search	Lobby → search Tower Rush → Galaxsys → Original: original card, three actions.	Suffix 2: return to search; do not import sequel parameters.
R02 Demo	Open Demo, wait for FUN and Build; TR-DEMO-01 starts at 1,000 FUN.	Frame restriction: separate official launch tab.
R03 Cash	Close demo, open Play in the operator account, select the wallet; CASH episode uses its own currency.	Zero cash balance: cashier route; FUN is not a deposit.
R04 Registration	Choose India and currency, complete required fields and confirm the required channel.	Wrong OTP: request a new code; no accepted payment exists.
R05 Recovery	Forgot password → email/phone confirmation → changed password; access restored. Other sessions are closed separately.	A code expired after ten minutes is replaced.
R06 Rules	Read Build, Frozen, Temple, Triple and cap; establish the multiplication base.	Slot-symbol payout tables do not apply.
R07 Paid cycle	Choose a valid stake, Build, wait for acceptance and result: one initial debit.	Rejection before acceptance is not a loss.
R08 Purchase/ante	Compare buttons with Original: no feature purchase.	The sequel Buy Bonus is not used in Original.
R09 Acceptance	TR-D-02 Build at 08:31:00.000 IST, acceptance at 08:31:00.240: one 10 FUN debit.	A repeated press before the reply did not create another bet.
R10 Cashout	TR-D-02 after 1.5×: confirmed 15 FUN gross; +5 FUN net.	An image without server acceptance is not a payout.
R11 Result check	Compare stake, factor, gross and balance: 10×1.5=15. Keep fairness inputs separate.	Do not replace the original cryptographic test vector with an arbitrary seed.
R12a Deposit	Create DEP for the chosen account and own method; D arrives at the time recorded for that episode.	Delay: inspect the existing request, without a second transfer.

Route	Action and recorded result	Error or boundary
R12b Withdrawal	Settled rounds and welcome disabled; confirm WD; receive W−fee and reduce game balance by W.	Cancel before sending to release the reserve; after sending, enquire about the existing operation.
R13 Recovery	TR-D-10: restore connection and read the original round; one 10 FUN debit and one 15 FUN gross.	Pending is not declared a loss; no repeat stake is sent.
R14 Limit	Daily deposit reduced 2,000→1,500 INR; session limited to 30 minutes; next entry beyond the limit blocked.	Increase delayed 24 hours; Auto Cashout is not a spending limit.

Operator-specific situations

Operator	Recorded situation and result
1Win	Email confirmation at registration and the separate withdrawal SMS were distinct steps. A repeat deposit was not required.
Stake	ERC20 was selected instead of TRC20 before sending. The network was corrected before confirmation; no erroneous transfer, fee or TXID arose.
MyStake	Profile → Bonuses → Activate after the deposit and before the first bet credited a 30 USD bonus on the separate 20 USD welcome deposit.
1XBET	Identity verification was completed at registration, before the first DEP. Reusing the document at WD did not create a credit or debit.
4RABET	A separate welcome episode did not credit automatically. SUP-4RABET-B corrected 0→437.50 INR as one credit, separate from the principal welcome episode.
Melbet	An expired recovery code was replaced with a new email code; CASH-MELBET balance remained intact.
Parimatch	Registration confirmed +91 by OTP. Absence of email confirmation was not described as documentary KYC.
Crorebet	The app-page UPI minimum was 100 INR. The actual deposit was 500 INR, followed by five 100 INR stakes; the 500 INR withdrawal minimum was met.
Betify	The sticky welcome was not activated in CASH-BETIFY. The separate WELCOME-BETIFY free spins retained their own conditions after winnings.
Betclic	A withdrawal form was cancelled before confirmation and reservation. Only final WD-BETCLIC created a money movement.

Recorded availability states

The recorded 4rabet page showed loading and “Not available in your region”; this describes that launch. Betclic login/registration routes returned HTTP 403 in their recorded state. A visible game card, an open demo and playable cash mode are different observations. Previous availability does not establish a new right to register.

After accepted stake connection loss, the rules provide settlement after one hour without restoration and credit registered winnings. Equipment/software malfunction voids the affected bets and payouts and refunds stakes. On recovery, compare the local record, stake and balance; reading history again must not be counted as another credit.
