Session limits and distinct spending measures

Tower Rush India • https://towerrushindi.com/en/responsible-gambling/

Deposit, loss and time are separate limits

The reported profile reduced its daily deposit limit from 2,000 INR to 1,500 INR and limited the session to 30 minutes. A subsequent entry beyond the limit was blocked. Increasing a limit carries a 24-hour delay. Auto Cashout is not a replacement for a spending limit.

Measure	Recorded model or rule
Session period	30 minutes
Break time	6 minutes
Active time	24 minutes =1,440 seconds
Cycle length	20 seconds
Available cycles	72
Share of cycles receiving a stake	75%
Accepted stakes	54
Stake size	20 INR
Total turnover	54 ×20 =1,080 INR
Session net-loss limit	300 INR from the opening bankroll
Separate daily deposit limit in the model	2,000 INR

Watching without staking creates no turnover. At a loss of at least 300 INR or elapsed time of 30 minutes, the next entry stops; the history of an already accepted bet is followed through settlement. A deposit ceiling does not equal total turnover, because money can circulate through more than one accepted bet.

Model stops do not erase losses

In the separate strategy model, a 2,000 INR opening bank stops at balance ≤1,700 INR or ≥2,300 INR, with at most 100 rounds. A stake that exceeds the available bank or the 10,000 INR cap is not placed. There is no all-in substitution. A loss can cross the stop threshold before the next entry is blocked. A positive remaining balance after a stop is not zero bankroll.

Age and responsibility

The editorial audience is 18+. Its age notice is not an operator identity check. The publisher does not accept bets or maintain casino wallets. An operator’s account controls and its KYC remain separate from the editorial website. The numerical examples describe their own episodes and models, not guaranteed protection against financial loss.
